

History

History is my favourite subject because I like learning about what life was like back in time. At the moment we are learning about the Romans, the Punic wars, the Roman army and so on. When we learnt about the Punic wars we learnt about Hannibal crossing the river Rhone and the alps with 36 elephants! The Roman soldiers had to train hard to become the best of the best, they knew how to break down the defence of the enemy, they knew how to build brick walls and roads they made Rome one of the best places to live at the time. To train soldiers had to carry sharp tools, cooking pots, blankets, pillows and swords, for miles and miles! Rome conquered

enormous amounts of land, from England to Africa from Turkey to Spain, the Mediterranean sea was practically a Roman lake! Most people agree that the Romans were fascinating people and very interesting to learn about, I agree.

science

One of my favourite lessons at school is science, the reason why is because I love to learn about the world around us. In science we've been doing about acids and alkalis, salts, atoms and molecules, the periodic table and now, the planets. When we learnt about the acids and alkalis we had to neutralize the acids we had to mix an extremely strong alkali with hydrochloric acid. If we spilt it on ourselves we would burn a hole straight through. We also had to learn signs that were normally placed on bottles of chemicals, like the toxic sign, the corrosive sign, etc...Mister Logan teaches us Science and he does It well.
